

Olga Ulturgasheva is a Senior Lecturer/Associate Professor in Social Anthropology at the University of Manchester, UK. She has published widely on human and non-human personhood, Indigenous childhood and youth, climate change, resilience, and adaptation in the Arctic. She currently serves as Principal Investigator and co-Principal Investigator on two major international, collaborative research projects funded by the US National Science Foundation (NSF) and the European Research Council (ERC). These projects examine the impact of climate change on knowledge production, environmental policy, and Indigenous adaptation practices in the Arctic and beyond
