CONTACTS	Via dell'Università, 50 47522 Cesena (FC) Italy	<i>Phone:</i> +39 0547 33 88 35 <i>E-mail:</i> enrico.gallinucci@unibo.it <i>Skype:</i> egallinucci
CITIZENSHIP	Italian	
CURRENT PLACEMENT	<b>University of Bologna, Department of Computer Science and Engineering</b> <ul style="list-style-type: none"><li>• Junior assistant professor (fixed-term)</li></ul>	
RESEARCH THEMES	My research activities are focused on the fields of Business Intelligence and Big Data, with a particular interest in the aspects of data modeling, integration and analysis, both from the methodological and algorithmic perspectives. Current research topics include: the design of a multistore system to manage data integration and to optimize queries on polyglot databases; the development of smart approaches to support the data scientist in searching, organizing and analyzing data in a big data environment; the design of innovative and scalable techniques to analyze large-scale trajectory data. I am involved in several projects to deploy my research efforts in practical applications, especially in the precision agriculture sector.	
RESEARCH METRICS	Scopus <ul style="list-style-type: none"><li>• H-index: 9</li><li>• H-index (without self-citations): 8</li><li>• Number of citations: 265</li><li>• Number of citations (without self-citations): 232</li></ul> Google Scholar <ul style="list-style-type: none"><li>• H-index: 11</li><li>• I10-index: 12</li><li>• Number of citations: 406</li></ul>	
EDUCATION	<b>Dipartimento di Informatica – Scienza e Ingegneria, Università di Bologna, Bologna (BO), Italy</b>  Ph.D. in Computer Science and Engineering, May 2017 <ul style="list-style-type: none"><li>• Thesis title: <i>Business Intelligence on Non-Conventional Data</i></li><li>• Thesis topic: extending traditional Business Intelligence techniques to store, integrate and analyze non-conventional data.<ul style="list-style-type: none"><li>* Analysis of semantically-enriched semi-/unstructured data in advanced BI systems, with a particular focus on social network content.</li><li>* Enhancement of multidimensional cubes in enterprise data warehouses through the integration of linked data.</li><li>* Definition of schema profiling and analysis techniques over NoSQL database systems in a Big Data context.</li></ul></li><li>• Supervisor: Prof. Stefano Rizzi</li><li>• Tutor: Prof. Matteo Golfarelli</li><li>• External reviewer: Prof. Robert Wrembel</li><li>• External reviewer: Prof. Esteban Zimanyi</li><li>• Area of Study: Business Intelligence 2.0</li></ul> Master's Degree, Computer Science and Engineering, March 2013	

- *110L/110 - Cum Laude*
- Thesis title: *DyNAMITE: Digital fighting tax evasion through data integration and analysis*
- Thesis topic: identification of potential tax evaders by integrating heterogeneous datasets and finding patterns describing fraudulent behaviors, followed by the development of a what-if predictive system to study fiscal fairness; conducted in collaboration with the Municipality of Cesena.
- Supervisor: Prof. Matteo Golfarelli
- Area of Study: Data Mining

Bachelor’s Degree., Computer Science and Engineering, October 2010

- *105/110*
- Thesis topic: Development of a digital exam record-book.
- Supervisor: Prof. Antonella Carbonaro
- Area of Study: Web development

**ITIS N. Baldini**, Ravenna (RA), Italy

Scientific high school, focus on computer science, July 2007

- 90/100

CERTIFICATIONS    Abilitazione Scientifica Nazionale al ruolo di professore di II fascia  
Code 01/B1 — Informatics  
Italian Ministry of Education, Universities and Research  
Starting 2022-06-01, ending 2032-06-01

RESEARCH            **Junior assistant professor @ University of Bologna    2021-06-15 — today**  
CONTRACTS        Three years fixed term research and teaching position. The main research theme is  
“Polyglot systems for data analysis”.

**Post-doc research fellow @ University of Bologna 2017-01-01 — 2021-06-02**

Contract type	Title	Start date	End date	Duration
Research grant	Bringing intelligence to the big data lake through smart meta-data management	2020-04-03	2021-06-02	14 months
Research grant	Enabling OLAP on heterogeneous sources	2019-04-03	2020-04-02	1 year
Research grant	Flexible OLAP Analyses over NoSQL Databases	2018-04-03	2019-04-02	1 year
Term contract	Completion and consolidation of the MO.RE.Farming data platform	2018-01-01	2018-03-31	3 months
Research grant	Analysis of agri-food products’ shelf-life quality and security	2017-01-01	2017-12-31	1 year

**NOTE:** Research grant = Assegno di ricerca. Term contract = Contratto di collaborazione continuativo.

Main research activities:

- Research and design of schema profiling techniques and OLAP analyses over NoSQL databases, even in presence of multiple storage systems (i.e., multistore).
- Predictive analytics and optimization of the execution of OLAP queries over SparkSQL and multistores through the development of advanced cost models.

- Envisioning and prototyping of a Big Data Platform approach to support data management and transformation within Data Lakes.
- Application of innovative and scalable techniques to analyze, anonymize and de-anonymize trajectory data.
- Profiling of social network users based on social interaction focused on topics like vaccines and politics.
- Design and development of a Big Data platform to support the analysis and spatial integration of information applied in the field of precision agriculture.
- Design and development of an approach to vocalize OLAP queries over data warehouses.

**Ph.D. student @ University of Bologna** **2014-01-01 — 2016-12-31**

Covered by a grant from the Italian Ministry of Research. I kept working on the research themes from the previous contract and contributed to novel proposals in the fields of Social BI, Exploratory BI, and Pervasive BI.

**Research fellow @ University of Bologna** **2013-04-05 — 2013-12-31**

Contract type	Title	Start date	End date	Duration
Research grant	Business Intelligence on Non-Conventional Data	2013-04-05	2013-12-31	8 months

**NOTE:** Research grant = Assegno di ricerca.

Research activity: I began my research activities in the fields of Social Business Intelligence and OLAP recommendation, envisioning analysis techniques for semantically-enriched semi-/unstructured data in advanced BI systems.

TEACHING

**Alma Mater Studiorum Università di Bologna**, Bologna (BO), Italy

**Teacher in Master's Degree courses**

Course name	Degree programme	A.Y.	CFU/ECTS	Hours	CS	ACS	NR
<i>Big Data</i>	Master's Degree in Computer Science and Engineering	2021/22	6	50	–	–	–
<i>Business Intelligence (Module 2)</i>	Master's Degree in Computer Science and Engineering	2021/22	6	10	–	–	–
<i>Big Data (Module 1)</i>	Master's Degree in Computer Science and Engineering	2020/21	6	40	72.2%	83.2%	18
<i>Big Data (Module 1)</i>	Master's Degree in Computer Science and Engineering	2019/20	6	40	92.7%	81.5%	41
<i>Big Data (Module 1)</i>	Master's Degree in Computer Science and Engineering	2018/19	6	40	94.7%	79.6%	19
<i>Big Data (Module 1)</i>	Master's Degree in Computer Science and Engineering	2017/18	6	40	83.3%	78.1%	12

**NOTE:** Students are mandatorily submitted an anonymous form where they can express their opinion about several aspects of the course in a four-valued scale (very negative, negative, positive, very positive). Such evaluations are reported here in the following form:

*CS*: course satisfaction;

*ACS*: average course satisfaction within the School or the VRA area;

*NR*: number of respondents.

*CS* and *ACS* report the fraction of students evaluating the course positively or very positively.

### Teaching tutor in Bachelor's Degree courses

Course name	Degree programme	A.Y.	CFU/ ECTS	Hours
<i>Lab-based Course on Databases</i>	Bachelor in Computer Science and Engineering	2015/16	4	30
<i>Lab-based Course on Databases</i>	Bachelor in Computer Science and Engineering	2014/15	4	30
<i>Lab-based Course on Databases</i>	Bachelor in Computer Science and Engineering	2013/14	4	30

### Master thesis coordinator

- Andrea Giannini: *Social Network Analysis: Architettura Streaming Big Data di Raccolta e Analisi Dati da Twitter*, 2022.
- Riccardo Maldini: *Pairs Trading: sviluppo e ottimizzazione di un modello di investimento basato sul Machine Learning*, 2021.
- Enrico Salvucci: *MLOps - Standardizing the Machine Learning Workflow*, 2021.
- Tommaso Bombardi: *Compressione e Vocalizzazione di Risultati Multidimensionali nel Paradigma OLAP*, 2021.
- Marta Luffarelli: *A text mining approach to materiality assessment*, 2021.
- Maria Maddalena Mascellaro: *Pubblicazione di dati di traiettoria preservando il principio di non informatività*, 2021.
- Alex Ravaglia: *Riconoscimento di frodi attraverso la modellazione del comportamento degli utenti*, 2021.
- Riccardo Salvatori: *Analisi delle strategie di modellazione dei dati su database NoSQL*, 2021.
- Luca Semprini: *Anonimizzazione incrementale di dati di traiettoria*, 2020.
- Eugenio Cavina: *GEAR: una piattaforma Big Data per l'elaborazione di stream di dati attraverso Machine Learning e Business Rules*, 2020.
- Anna Giulia Leoni: *Gestione di un data lake strutturato attraverso il riconoscimento semantico dei dati acquisiti*, 2019.

### Master thesis advisor

- Chiara Forresi: *Un framework per l'analisi di big data con elevata eterogeneità all'interno di multistore*, 2020.
- Rrok Gjinaj: *Progettazione e prototipazione di un sistema di Conversational BI*, 2020.
- Nicola Santolini: *Utilizzo di dati social per la deanonimizzazione di tracce GPS*, 2019.
- Giovanni Di Meo: *Analisi delle comunità Twitter legate al tema dei vaccini*, 2018.
- Alessio Addimando: *Progettazione di un intrusion detection system su piattaforma big data*, 2018.

### Bachelor theses advisor

- Luca Paoloni: *Estrazione automatica degli schemi di una collection all'interno di un DBMS NoSql e calcolo delle dipendenze funzionali tra gli attributi dello schema*, 2019.
- Shapour Nemati: *Un sistema per l'acquisizione automatica dei metadati per SparkSQL*, 2018.
- Alessandro Collerà: *Classificazione e selezione di tecniche di visualizzazione per Big Data Analytics*, 2016.
- Francesco Capponi: *Analisi della piattaforma Nutch*, 2016.
- Antony Chiossi: *Progettazione e prototipazione di un sistema di Social Business Intelligence con Hadoop Impala*, 2015.
- Luca Longobardi: *Progettazione e prototipazione di un sistema di Social Business Intelligence con Elasticsearch*, 2015.

PARTICIPATION IN RESEARCH GROUPS

**Business Intelligence Group**

**March 2013 — today**

The primary research group I am working with. The main focus of the group is on studying the architectures, techniques, and methodologies aimed at extracting value from data in the most diverse business contexts. The group is lead by Prof. Stefano Rizzian and Prof. Matteo Golfarelli, and operates in the University of Bologna.

**DTIM Group****October 2014 — January 2015**

Collaboration with the Database Technologies and Information Management research group at the Universitat Politècnica de Catalunya led by Prof. Alberto Abelló and Prof. Oscar Romero. The collaboration focused on creating innovation in the field of Exploratory Business Intelligence, with a specific emphasis on leveraging linked data to enhance multidimensional cubes.

**CIRI-ICT****June 2021 — today**

CIRI-ICT is the interdepartmental industrial research center of the University of Bologna for information and communication technologies. Its mission is to promote technology transfer and support innovation for large, medium, and small businesses in the area.

**CINI****2016 — today**

CINI (National Interuniversity Consortium for Informatics) is the main point of reference for the Italian national academic research in the fields of Computer Science, Computer Engineering, and Information Technology. In a very strict cooperation with the national scientific communities, the Consortium promotes and coordinates scientific activities of research and technological transfer, both basic and applicative, in several fields of Computer Science and Computer Engineering,

PARTICIPATION IN  
RESEARCH  
PROJECTS

**WeLASER****2020 — today**

Type: H2020-SFS-2018-2020

The increased use of pesticides and fertilisers damages the environment, destroys non-target plants and beneficial insects for the soil, and harms human and animal health. Most seeds develop herbicide-resistant properties, rendering pesticides ineffective. Mechanical automatic systems that are studied as alternatives to pesticides deteriorate soil features, damage beneficial soil organisms, and offer limited results for in-row weeding. The project will develop a non-chemical solution for weed management based on pioneering technology consisting of the application of lethal doses of energy on the weed meristems through a high-power laser source. An AI-vision system separates crops from weeds, identifying the weed meristems and pointing the laser at them. A smart controller based on IoT and cloud computing techniques coordinates the system, which is transferred all over the field by an autonomous vehicle.

**Piano Cimice.Net****2020 — today**

The goal of the project is to create an online platform to collect, process, and analyze data on the presence of *Halyomorpha halys* populations in the main fruit areas of the region. The real-time visualization of the data provides punctual and reliable monitoring information, thus constantly supporting technicians and farmers in the adoption of a more rational management in the field of strategies for fighting the Asian bedbug. These data, collected over a period of two years, will be integrated with meteorological measurements and territorial characteristics. This will make it possible to identify biotic or abiotic environmental factors that influence the presence of *Halyomorpha halys* and its harmfulness in a specific territory and thus facilitate the definition of intervention strategies, including those of a territorial nature.

**Agro.Big.Data.Science****2019 — today**

Type: POR-FESR 2014-2020 - Asse 1 Ricerca e innovazione

The growing availability of technologically advanced sensors capable of gathering various information along all the links of the agro-food chain allows to face the problems related to the diagnosis, forecasting, and improvement of the supply chains, with a data-driven approach. The project intends to apply the data-driven logic to 3 production chains (kiwi, pear, and spinach) made available by the companies participating in the project, complete with the sensors for real-time data collection. Data collection and analysis will be managed by a Big Data platform specific to the agro-food sector, designed to be

flexible and usable also by different supply chains.

### **Mo.Re.Farming**

**2016 — 2018**

Type: POR-FESR 2014-2020 - Asse 1 Ricerca e innovazione

The project intends to develop a data collection and management platform, that integrates enterprise data with public datasets to support technicians and farmers in the decision-making process and to promote more sustainable cultivation techniques (i.e., precision farming). To achieve this goal, the project aims to develop innovative ways of monitoring the status of the soil and the plant (in-situ sensors) and their spatial variability (satellite remote sensing, use of drones). It also intends to arrange an integrated data hub, overcoming the lack of interchange between public and private sources (e.g., agronomic, meteorological), so as to offer high-value information for the decision-making process.

### **Toreador**

**2016 — 2017**

Type: H2020 - Big Data: Research

The TOREADOR project is aimed at overcoming some major hurdles that until now have prevented many European companies from reaping the full benefits of Big Data analytics (BDA). To this end, the delivery of TOREADOR is an architectural framework and a set of components for model-driven set-up and management of BDA processes; the goal is to address automatically all major problems of on-demand data preparation, including handling Big Data opacity, diversity, security, and privacy compliance, as well as to support abstract modeling of the BDA life cycle.

### **Innofruve**

**2017**

Type: POR-FESR 2014-2020 - Asse 1 Ricerca e innovazione

The goal of the project is to foster innovation in the regional agro-food industry, the qualitative and functional improvement of various vegetable products, and the enhancement of waste processing. This is done by monitoring and analysing the decay of the organoleptic properties of products, from the primary production process and throughout the cold chain. Innovative technologies will be studied to stabilize and increase the shelf-life of minimally-processed fruit and vegetable preserves.

### **WebPolEU**

**2013 — 2015**

Type: FIRB 2012

Social media are widespread and are an integral part of people's daily lives. Web 2.0 is one of the social environments in which citizens manage a significant part of their relationships and become aware of political information and opportunities to be involved in the public sphere. Political actors also have to deal with these forums, and their strategies can help alleviate or exacerbate the crisis of citizens' trust towards parties and institutions. The project will address all these aspects, integrating qualitative and quantitative methods in a comparative perspective. In particular, the research will analyze the digital literacy of young people, the political behavior of online citizens, the content and methods of political discussions on social media, and strategies for online communication of institutional political actors. The European political elections in 2014 serve as the primary focus of the research project.

PH.D. THESIS

- [29] E. Gallinucci, “Business intelligence on non-conventional data,” Ph.D. dissertation, University of Bologna, Italy, 2017. [Online]. Available: <http://amsdottorato.unibo.it/7863/>

PROFESSIONAL EXPERIENCE

**C.R.P.V. soc. coop.**, Cesena (FC), Italy

*Consultant data analyst* **2020**

- Understanding the reasons behind the spread of diseases on pear plants.

**RE2N S.r.l.**, Cesena (FC), Italy

*Consultant data analyst* **2017, 2018, 2019**

- Materiality assessment for big enterprises.

**Onit S.r.l.**, Cesena (FC), Italy

*Consultant data analyst* **2015, 2016**

- Analysis of social media discussions concerning vaccines and related fears.

**Tinfo S.r.l.**, Forlì (FC), Italy

*Software developer* **2010**

- Back-end and front-end development of an IT management system.

Web Consulting S.r.l., Cesena (FC), Italy

*Software developer* **2009**

- Back-end and front-end development of an IT management system.

SKILLS

Big Data management and analysis:

- Distributed file systems (HDFS)
- Distributed databases (MongoDB, Cassandra, HBase, ElasticSearch)
- Distributed execution frameworks (Spark, Hive, Impala)
- Ecosystem management (Cloudera CDH)
- System orchestration and administration (Oozie, Hue)

Business Intelligence and Data Mining:

- Conceptual modeling (Indyco)
- Data integration (Pentaho DI, Talend)
- Multidimensional engines (Mondrian)
- OLAP analysis and visualization (Tableau, Saiku, JPivot)
- Data Mining (Weka)

Database Management Systems:

- Relational DBMSs (Oracle, MySQL, PostgreSQL, Microsoft SQL Server)
- NoSQL DBMSs (MongoDB, Neo4j, Cassandra, Redis, HBase, AgensGraph)
- GIS systems (Oracle Spatial & Graph, PostGIS, GeoSpark)

Computer programming:

- Java, PHP, Scala, Python, R, JavaScript, HTML, CSS, SQL, PLSQL, SPARQL
- Object-oriented and functional programming
- Mobile programming (Android)

Software engineering:

- Distributed Version Control Systems (Git)
- Build systems (Gradle, Maven)

Web development:

- Web servers (Apache, Tomcat)
- Content Management Systems (Drupal)
- Responsive frameworks (Bootstrap)
- Charts and maps (D3, OpenLayers)

Operating Systems:

- Linux (CentOS, Debian, Ubuntu)
- Microsoft Windows family

SPOKEN  
LANGUAGES

Italian

- Mother tongue

English

- C1 (understanding); B2 (speaking, writing)

Spanish

- A1 (understanding, speaking, writing)
