7. Attività di ricerca scientifica

7.1 Interessi di ricerca

Durante i quasi 40 anni della mia attività di ricerca ho esplorato diverse aree della medicina occupazionale e ambientale con una forte attenzione al collegamento tra attività di ricerca e pratica, aderendo al principio della medicina basata sull'evidenza. Ciò caratterizza ancora la mia attività scientifica (e quella dei colleghi che lavorano con me).

Il periodo iniziale (anni 1980-1990) della mia attività di ricerca è contraddistinto da un specifico interesse verso l'applicazione delle tecniche elettrofisiologiche (perfezionate durante un soggiorno al Dipartimento di Fisiologia dell'Università di Liverpool nel 1981) allo studio della patologia da lavoro, e principalmente alle esposizioni a pesticidi e solventi. Caratteristici di tale periodo sono alcuni lavori sulle neuropatie associate all'esposizione a pesticidi organofosforici e a solventi, prevalentemente pubblicati su riviste scientifiche nazionali. Prende forma in quegli anni anche un interesse specifico verso l'epidemiologia clinica della patologia da lavoro e la tossicologia occupazionale e ambientale (in questo ultimo campo prevalentemente applicata allo studio della contaminazione di lavoratori - e non - da parte di pesticidi organoclorati).

Successivamente (anni 1990-2000) l'interesse verso l'applicazione delle tecniche elettrofisiologiche alla Medicina del Lavoro mi spinge ad applicarle allo studio della patologia muscoloscheletrica dell'arto superiore, ed in particolare alla sindrome del tunnel carpale. In questo campo ho avviato una fitta serie di rapporti internazionali (ancora in atto), in particolare con il Center for Ergonomics dell'Università del Michigan ma anche con altri centri negli Stati Uniti e in Europa. Risale a quegli anni anche una intensa attività di reperimento di risorse umane e finanziarie per attrezzare un laboratorio di elettrofisiologia e biomeccanica per lo studio della patologia muscoloscheletrica (con l'uso anche di metodiche ecografiche per la valutazione di muscoli e tendini), un laboratorio di tossicologia dotato di attrezzature di alto livello per analisi di tipo chimico e un laboratorio di epidemiologia. Caratteristiche di questo periodo sono le prime pubblicazioni sulla patologia muscoloscheletrica e l'organizzazione del primo Congresso Nazionale della Società Italiana di Medicina del Lavoro e Igiene Industriale dedicato a questo tema (Bologna, 1995).

Ancora successivamente (anni 2000-2010), reperite le risorse umane, strumentali e finanziarie necessarie, ho dato impulso ad un'intensa attività di ricerca sui temi della patologia muscoloscheletrica, dell'epidemiologia, della tossicologia occupazionale e ambientale e della medicina preventiva che si traduce in numerose pubblicazioni su riviste con Impact Factor, libri e capitoli di libri pubblicati da editori

internazionali. In tema ambientale sono stato componente del Comitato Scientifico del progetto MONITER della Regione Emilia-Romagna (impatto ambientale e sulla salute degli inceneritori di rifiuti) ed ho curato la valutazione degli impatti sulla salute di grandi infrastrutture di trasporto, quali il corridoio Tirreno-Brennero, la Tangenziale Esterna Milanese e l'autostrada Cispadana.

La mia attività più recente (2010 ad oggi) si è concentrata maggiormente sull'epidemiologia (sia dei tumori che di altre patologie), sui temi della salute globale e dell'economia sanitaria. Uno dei progetti più recenti al quale collaboro in veste di esperto per i problemi occupazionali ed ambientali e per l'Italia è il Global Burden of Disease Study, condotto dall'Institute for Health Metrics and Evaluation (Prof. CJ Murray) e finanziato dalla Bill and Melinda Gates Foundation. Sono anche il responsabile del più vasto studio fino ad oggi pubblicato nel mondo sulla sindrome del tunnel carpale di natura lavorativa (4.000 lavoratori, 10 anni di follow-up). Inoltre, sto lavorando con diverse compagnie per migliorare l'ergonomia e l'efficienza dei processi produttivi: durante queste ricerche sono stati sviluppati prodotti altamente innovativi, già oggetto di brevetto, mentre altri sono attivamente sviluppati.

Ho sempre dato grande valore alla collaborazione internazionale nella ricerca e formazione: sono stato responsabile della definizione di un Protocollo d'intesa per progetti di ricerca comuni, scambio di insegnanti e studenti, tra la Scuola di Medicina dell'Università di Bologna e la Harvard School of Public Health da un lato, e la Scuola di Medicina Mount Sinai di New York dall'altro. Di tali accordi sono responsabile per l'Ateneo Bolognese.

7.2 Brevetti

- 21.6.2017 numero 102017000069353, Sensorized glove for monitoring hand force during manual work
