COORDINATION OF RESEARCH GROUPS AND SCIENTIFIC RESEARCH ACTIVITY

At present I direct a research team that includes **one foreign PhD students** enrolled in the PhD school of “Agricultural, Environmental and Food Science and Technology”. Most of the activities of the team revolve around **metabolomics** and the **interaction between water and biopolymers in food** matrices. The team faces these issues by nuclear magnetic resonance (NMR), respectively in its variants high resolution on proton ($^1\text{H-NMR}$) and time domain (TD-NMR). The team actively interacts with national and international research groups. Some of them are:

The research activities can be grouped as follows:

How technological treatments affect food microstructure and water bioavailability.

With TD-NMR we observe the water location inside food microstructure, as well as its interactions with biopolymers, the latter by registering relaxation and diffusion signals. These skills are the base for works mainly with food technologists and animal production experts, who want to observe the consequences of innovative technological treatments on foods, by going beyond the concept of water activity. Examples can be found in Cropotova 2016, Dellarosa 2016, Mauro 2016, Balestra 2015, Iaccheri 2015

How technological treatments influence food biology and, from that, its shelf life and its appreciation by the consumers.

I face these issues by studying food water extracts metabolome, which is the ensemble of little organic molecules, by means of high-resolution nuclear magnetic resonance ($^1\text{H-NMR}$). I currently have direct experience on probiotic mixtures, wine, meat and fruit extracts. Examples can be found in Bianchi 2020, Bordoni 2011, Ercolini 2011

How diseases and diet influence human and animal metabolome.

I face these issues by studying bio-fluids metabolome, which is the ensemble of little organic molecules, by means of high-resolution nuclear magnetic resonance ($^1\text{H-NMR}$). Examples can be found in De Filippis 2015, Vitali 2015, Barone 2020, Laghi 2014
