## SHORT BIO

I'm an Assistant Professor at the Department of Modern Languages, Literatures, and Cultures of the University of Bologna and an Associate Researcher at Institute of Cognitive Sciences and Technologies (ISTC) of the Italian National Research Council (CNR). I teach Semantic Web, Computer Science and History of Digital Technologies for the Bachelor's degree in Digital Communication Design at the IAAD.

I obtained my master's degree in computer engineering at the Sapienza University of Rome in 2014. I developed my master's thesis under the supervision of Professor Giuseppe De Giacomo, in the scope of service integration. During this experience, I started my research on formal semantics, particularly their application in the automatic integration of services whose behaviour is formally described.

A few months later, I joined the Institute of Cognitive Science and Technology of the CNR in Rome as a junior research fellow. During this period I continued the research on formal semantics but from a different standpoint, i.e. designing ontologies in cultural heritage and agri-food domains (cf. Cultural-ON and FOOD projects) and integrating knowledge extracted from structured sources following the Linked Data paradigm (i.e. Cultural-ON and FOOD national projects and the EU project MARE).

In 2015 I obtained a doctoral scholarship at University of Bologna and I continued my research on ontologies, empirical semantics and Semantic Web applied at the social robotics domain under the supervision of Prof. Paolo Ciancarini and Prof. Valentina Presutti. During my doctoral studies, I have continued the collaboration with STLab on the EU-H2020 MARIO project which provided me with the opportunity of experimenting with the contributions of my research work in a socially assistive robotics case study and in ontology design projects within the cultural heritage domain (i.e. ArCo, NEPTIS, Portale delle fonti per la storia della Repubblica italiana). I have successfully defended my PhD in 2019.

In 2018, I have been a visiting student at the Vrije Universiteit of Amsterdam under the supervision of Prof. Frank van Harmelen. The collaboration focused on developing a novel approach to observe the empirical semantics of Linked Open Data taxonomies. The result of this collaboration is an article that has been presented at ISWC 2019 (cf. [CON4]).

I continued my research on formal and empirical semantics at the Institute of Cognitive Science and Technology as a post-doctoral research fellow.

From 2015 to 2020, I also served as a teaching tutor for the University of Bologna.

In 2020, I joined the Department of Philology and Classical Studies of the University of Bologna as Assistant Professor (RTDa), where I'm participating in the SPICE project as leader of the task T6.3 "Ontology Network for citizen curation".

In 2020, I passed the Italian government exam and was licensed as a professional Information Engineer.

In 2023, I joined the Department of Modern Cultures, Literatures and Languages of the University of Bologna as Assistant Professor (RTDa), where I'm participating in the FAIR project as leader of the tasks 8.7.1 " Empirical semantics from large-scale creative data" and 8.7.3 "Learning and generation of creative artefacts from large-scale data".

I have also served the scientific community by co-organizing international research events, participating in multiple conference and workshop program committees, and reviewing papers for international journals, conferences and workshops. I have co-authored scientific papers for international journals, such as ACM-TOIT, IEEE Access, ACM-JOCCH and JoWS, and international conferences including IJCAI and ISWC.

According to Google Scholar, my publications have received 482 citations, and my H-Index is 12. According to Scopus, my publications have received 212 citations, and my H-Index is 7.

I have collaborated on the design and development of multiple ontologies, knowledge graphs and open-source software frameworks (see dedicated sections below). Notably, I'm one of the main designers of [SPARQL Anything](#), a tool that uses a unique data schema to allow users to query non-RDF resources as if they are RDF (cf. [JOU4] and [CON2]).

**Research Interests** Knowledge Graphs, Linked (Open) Data, Data and Knowledge Integration, Ontology Engineering, Knowledge Representation, Common Sense Knowledge, Empirical Semantics, Social Robotics.
